

//Experiment 4A: Write a JavaScript program to compare two strings using various methods

### Input :-

```
//Method 1: Using toUpperCase()

// js program to perform string comparison

const string1 = 'JavaScript Program';
const string2 = 'javascript program';

// compare both strings
const result = string1.toUpperCase() === string2.toUpperCase();

if(result) {
    console.log('The strings are similar.');
```

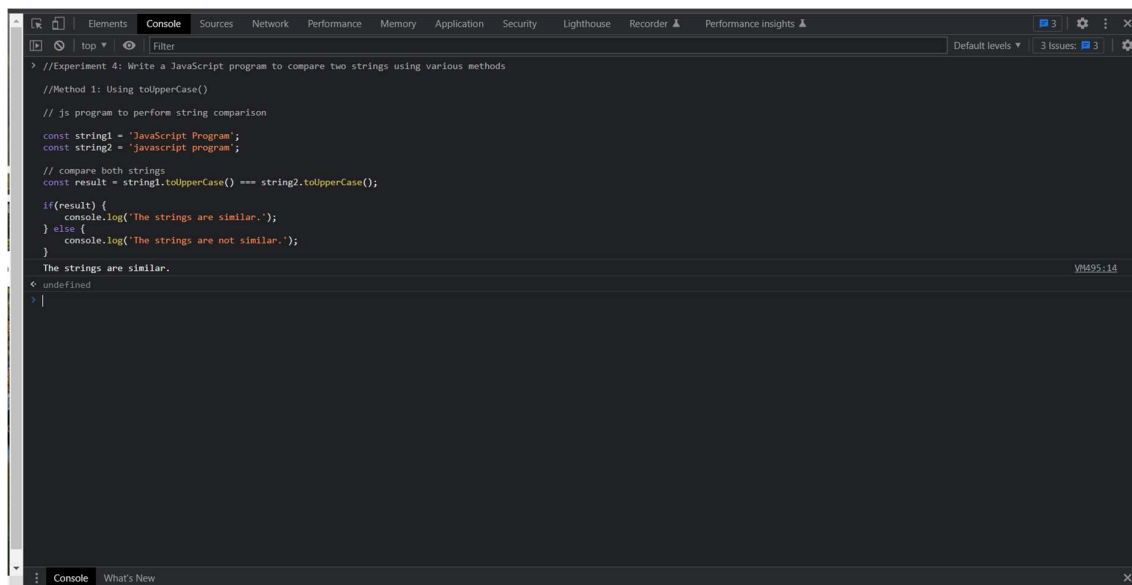

}

else {

console.log('The strings are not similar.');

}

### Output :-

```
> //Experiment 4: Write a JavaScript program to compare two strings using various methods
//Method 1: Using toUpperCase()

// js program to perform string comparison

const string1 = 'JavaScript Program';
const string2 = 'javascript program';

// compare both strings
const result = string1.toUpperCase() === string2.toUpperCase();

if(result) {
    console.log('The strings are similar.');
```

}

else {

console.log('The strings are not similar.');

}

The strings are similar.
